

Sales Performance Executive Case Study

Prepared by: Nicholas Guthery

Date: June 17, 2026

Project Overview

This project analyzed e-commerce sales data to identify factors influencing revenue generation and customer purchasing behavior. Microsoft Excel was used for data cleaning, KPI calculations, and PivotTable analysis, while Tableau was used to develop an interactive dashboard.

Tools Used

- Microsoft Excel
- Tableau
- PivotTables
- KPI Analysis

Key Metrics

- Total Revenue: \$737,326.88
- Total Orders: 1,000
- Total Units Sold: 2,947
- Average Order Value: \$737.33
- Average Customer Rating: 3.19

Key Findings

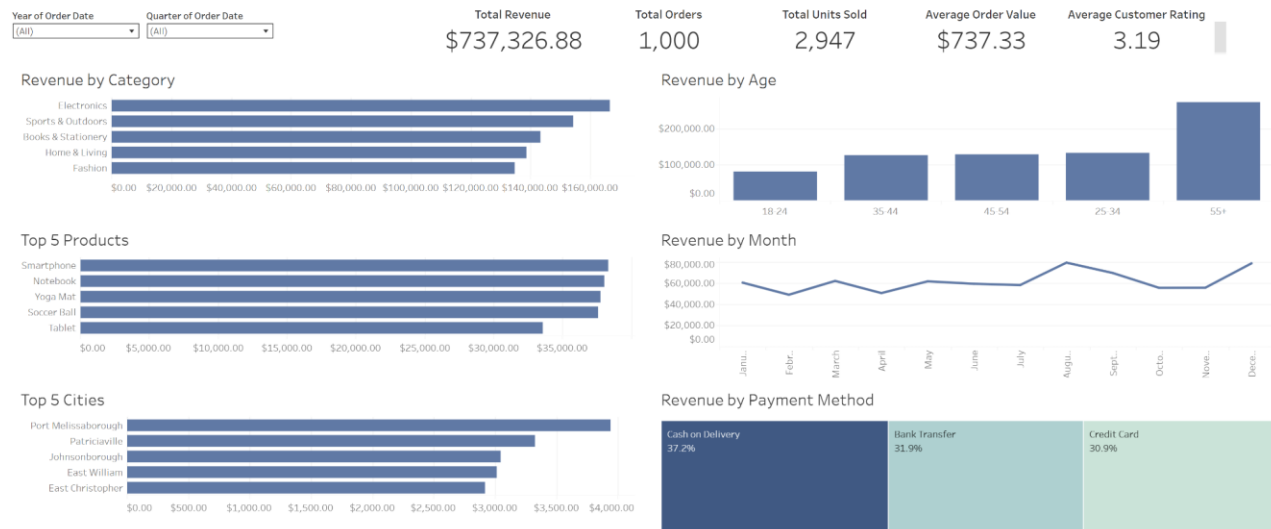

- Electronics generated the highest revenue among product categories.
- Customers aged 55+ contributed the largest share of revenue.
- Revenue displayed seasonal fluctuations throughout the year.
- Cash on Delivery was the most frequently used payment method.

Recommendations

- Increase promotional efforts during slower sales periods.
- Expand marketing initiatives targeting younger customers.
- Analyze customer satisfaction data to identify improvement opportunities.
